

A Diffusion Model for Protein-Ligand Binding Prediction

Abstract

We propose a diffusion model for protein-ligand binding prediction using PDBBind and evaluate RMSD and

1 Introduction

AI for drug discovery often compares docking methods on PDBBind.

2 Methods

Our diffusion model uses a transformer backbone.

3 Results

The model improves RMSD and AUROC compared with baseline methods.

4 Limitations

The method is limited by dataset bias and does not test wet-lab validation.
